Job For U

A web platform where users can post job opportunities and find suitable candidates for their open positions

Project Overview

Job For U is a revolutionary platform that bridges the gap between job seekers in Bulgaria and employers seeking talented individuals. The platform addresses the challenges faced by both parties in the recruitment process.

Job seekers benefit from a user-friendly interface that allows them to create profiles, upload resumes, and search for jobs that match their skills and preferences. Employers can post job listings, manage applications, and connect with potential candidates directly through the platform's integrated messaging system.

Job For U aims to streamline the hiring process, reduce time-to-hire, and improve the overall experience for both job seekers and employers in the Bulgarian market.

The problem statement

Bulgarian companies, such as Job For U, encounter several challenges in their recruitment efforts. These include time-consuming manual processes, difficulties in reaching qualified candidates, and ensuring the compatibility between job seekers and employers. The lack of a centralized, user-friendly platform exacerbates these issues, leading to inefficiencies and missed opportunities for both parties.

Project Goals

- Reduce time-to-hire for employers
- Enhance job seeker experience
- Create a scalable and secure platform
- Implement AI-powered resume matching
- Develop a robust messaging system
- Ensure data security and compliance

User problems & Solutions

- Difficult candidate search for hiring manager profile → Enable advanced search filters and AI-powered matching
- Time-consuming manual processes → Automate job posting and application tracking
- Limited reach for job seekers → Provide a centralized platform with targeted job recommendations
- Lack of a user-friendly platform → Develop an intuitive interface with clear navigation
- Inefficient communication → Implement a secure messaging system
- Data security concerns → Implement robust encryption and GDPR compliance measures

User Personas

Plugins & Tools

- **Figma**
  - Crazy 8
  - Wireframes
  - Design System
  - Storyboard
- **Figma**
  - Lorem ipsum generator
  - Unsplash integration
- **Jira**
  - Kanban board
  - Sprint management
- **Slack**
  - Messaging
  - Video Chats / Calls

Future Development Ideas

- Implement a recommendation system for job seekers based on their profile and publication history
- Develop an AI-powered resume parser for automatic candidate profile creation
- Integrate a blockchain-based verification system for job seeker credentials to combat fake profiles
